EDITOR'S PREFACE

The Sixth Biennial Conference of the American Deafness and Rehabilitation Association may well be destined to become the most significant of meetings in the history of this young organization. Held in San Antonio, Texas on March 6-10, 1978, the conference focused on the theme, "Deafness and Special Problems". A multitude of innovations and advances were evident throughout the conference, ranging from the exceptional quality of the papers presented to the equally exceptional enthusiasm and dedication of the large number of para-professionals, parents and consumers in attendance.

The report of the proceedings of this meeting contained herein represents this quality well; the papers are indicative of the strength of our profession for they represent people — sharing knowledge and experience with other people for the betterment of both. In this quality lies the greatest strength of our profession and our organization.

It is with sincere appreciation that I acknowledge the many individuals who assisted in the creation of this document. I am particularly grateful to the many student volunteers from Northern Illinois University, Gallaudet College, and the University of Arizona who assisted with the recording function, to each of the contributors whose patience with my queries and deadlines was greatly appreciated, and to Glenn Mathews and Rex Purvis whose encouragement and assistance was immeasurable. Finally, my most sincere thanks to Dr. Gary Austin and the Department of Communication Disorders at Northern Illinois University.

Sue E. Ouellette, Ph.D.
Assistant Professor
Counselor Training with the Hearing Impaired
